

MWANGI BRIAN

Software Engineer | Full-Stack Developer

Nairobi, Kenya | +254791948842

wambuimwangibrian@gmail.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

A results-driven and highly proficient Full-Stack Software Engineer with comprehensive experience architecting, building, and deploying scalable web applications, secure APIs, and deeply nested data architectures. Possesses a strong track record across frontend architecture (React, TypeScript), backend frameworks (Node.js, Express, PHP/Laravel, Python), and data validation methodologies (complex JSON Schema engineering). Proven capability in managing full development lifecycles, robust CI/CD automation pipelines, containerization (Docker), and database optimization. Combines exceptional technical efficiency with strong remote collaboration and communication skills, balancing a rich technical background in modern software engineering and distributed systems with a user-centric approach.

TECHNICAL SKILLS

Languages:

JavaScript (ES6+), TypeScript, Node.js, Python (Flask), PHP (Laravel), HTML5, CSS3

Frontend Architecture & State:

React.js, Next.js, Redux, Context API, Responsive Design, Accessibility (a11y), Cross-Browser Compatibility

Backend & API Engineering:

RESTful APIs, Microservices, GraphQL, API Gateway Management, JSON Schema Design (Multilevel Nesting & Validation), JWT Standards, Secure Data Handling

Databases & Cloud DevOps:

PostgreSQL, MySQL, MongoDB, Docker, Containerization, Git/GitHub/GitLab, CI/CD Pipelines, Vercel, Server Management & Site Scaling

Testing Frameworks:

Playwright, Jest, PEST (PHP), Debugging & Performance Auditing

Systems & CMS:

Payload CMS, WordPress, Salesforce Integration, Google Workspace, Agile Methodologies

WORK EXPERIENCE

Software Developer & Technical Mentor | Circular Innovation Hub

April 2026 – Present | Hybrid (Nairobi, Kenya)

Lead the end-to-end design, frontend architecture, and systems deployment for a leading regional technology workshop platform.

- **Frontend Engineering:** Developed the primary web presence and content management systems by building responsive frontend components using React.js merged with a Next.js-based Node backend layer (Payload CMS), maximizing modularity and platform performance.
- **Infrastructure & DevOps:** Facilitated server management, containerized deployments using Docker, handled continuous updates via Git/GitLab pipelines, and implemented performance tracking to scale systems seamlessly.
- **Cross-Functional Collaboration:** Partnered closely with product stakeholders to deliver high-quality, accessible interfaces, and provided technical guidance on application reliability.

Software Developer | Lido Nation Foundation

April 2025 – April 2026 | Hybrid (Nairobi, Kenya)

Engineered data-heavy web applications and full-stack solutions, optimizing performance, complex data mapping, and platform transparency.

- **Data Architecting & Pipelines:** Architected robust pipelines to transform unstructured, complex multi-page Cardano blockchain data into deeply structured JSON schemas and clean, filterable analytics dashboards.

- **Module Engineering:** Developed a real-time transaction validation and confirmation module utilizing custom transaction hash indexing, ensuring optimal data integrity and performance.
- **Full-Stack Architecture:** Engineered comprehensive parameter classification engines and donation workflow features using PHP/Laravel, React.js, and PostgreSQL, introducing local currency integrations (KES) and real-time API conversion systems.
- **Testing & Mentorship:** Implemented end-to-end testing scripts and code reviews to maintain code quality while conducting technical training and mentorship for incoming volunteer software developers.

Web Developer | Blockchain Centre Nairobi

June 2025 – September 2025 | Remote

- **Hybrid Architecture:** Built and optimized user interfaces with a focus on load performance and usability by integrating a component-based React application layer into legacy WordPress infrastructure.
- **API Integration:** Connected frontend views with secure RESTful APIs to ensure reliable, seamless data flow.

Software Developer | Ngong Road Children's Foundation (NRCF)

January 2025 – April 2025 | Full-Time (On-Site)

Maintained and optimized critical organizational software assets, enhancing internal tools and data security.

- **System Optimization:** Refactored the internal student web portal, resolving critical processing bugs, introducing paginated data rendering, and conducting routine performance audits to ensure 99.9% application uptime.
- **Secure Integrations:** Managed secure data flows and synchronization across Salesforce, custom databases, and external web forms following industry best practices for secure data handling.

Software Developer & CTO | Sigma Africa Accelerate

September 2023 – May 2026 | Remote

- **Technical Leadership:** Led the end-to-end web strategy, technical research, and initial architecture blueprinting for the organization's primary applications.
- **Full-Stack Implementation:** Built and maintained scalable full-stack web platforms using Laravel, React.js, TypeScript, and PostgreSQL deployed efficiently onto cloud-optimized environments.

EDUCATION

Bachelor of Arts in Psychology | Kisii University (2022 – Present)

Certificate in Software Engineering | Moringa School (2024 – 2025)
